

### **3. Recognition of FTA modules at UiA**

The following courses are recognized as electives in the graduate programme of Information Systems at UiA:

- The concepts of Free Software and Open Standards
- Economic aspects of Free Software
- Legal aspects of the Information Society

For students in the UiA bachelor programme in IT and Information Systems, at most six FTA modules will be recognized within the IS/ICT part of the elective area.

These modules will be incorporated into the student's transcript with the UiA grade scale which is equivalent to the FTA grade as shown in the following table:

| <b>FTA Scale</b> | <b>UiA Scale</b> | <b>Rating</b>       |
|------------------|------------------|---------------------|
| 9,10             | A                | Very good           |
| 7,8              | B                | Good                |
| 6                | C                | Satisfactory rating |
| 4,5              | F                | Low rating          |
| 1,2,3            | F                | Very low rating     |
| N                | N                | Not rated           |

Only subjects graded with 6 or higher are subject to be recognized by UiA.

- Since the examination procedures for FTA modules form an integral part of the course, it is not possible to obtain credit for these modules in any other way than by participating in the course.
- FTA modules may demand prerequisites that are not automatically fulfilled for every UiA student. It is the student's responsibility, when registering for an FTA course, to check that he or she satisfies the prerequisites.

The present annex B shall form an integral part of the Agreement. The annex B is valid from 30/11/2009 and enters into force once it has been signed by the contracting parties.
